

Archive-It

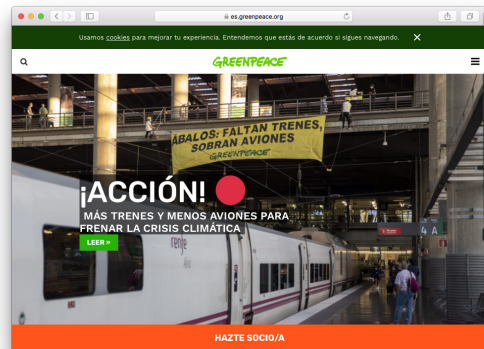

Web Snapshot Service

Want to archive a snapshot of a website, social media feed, or other web platform prior to it being taken offline, deleted, or redesigned? Our Web Snapshot Service builds on [Archive-It's expertise and custom open-source technologies](#) to preserve web-published material. These archived websites can be revisited in the future, like snapshots, and preserve the qualities and functionality of the original websites in a particular moment in time.

Features

- **Fully Managed:** You select the websites, social media, or online documents to be archived and the Archive-It staff will do the rest and work with you to ensure the snapshots meet expectations.
- **Access Options:** Share your snapshots publicly via [archive-it.org](#), the [Wayback Machine](#), or privately with select users. Access points may include full-text search and your descriptive metadata. Archive-It can provide tools for integrating your snapshots with your websites or other collections.
- **Forever Storage:** Multiple copies of your archived data are stored securely at the Internet Archive's independent data centers and are available for you to download at any time.
- **Swift Turnaround:** Snapshots are generally completed within 30 days.

Greenpeace International employed Archive-It's Web Snapshot Service to preserve their websites (left) before a planned redesign (right).

Pricing

- Pricing varies according to the size of the websites but is usually \$500 to \$2000.
- Custom pricing options are available for more extensive or specialized services.
